Multi-Purpose Time Device

Z-SERIES Z14
SEE BACK FOR DETAILS

Z-Series—Exceptional Value

FlexClock is a feature-rich timekeeping solution that offers employers a wide variety of valuable labor management technologies through practical timekeeping devices.

The FlexClock Z14 with color screen gives employers the ability to deliver valuable information to the employee regarding their time card while clocking in/out (future release). It is also an affordable real-time solution (Ethernet-enabled) offering the convenience of PIN, proximity badge card or key fob punching for recording in/out punches.

Proximity Cards

Product Overview

Punch Data Collection

Collecting employee punches with the Z14 can be easily done by entering an employee PIN code.

In addition, employees may use a proximity badge card or key fob for added convenience while clocking in/out, which can reduce the time and errors involved with using a PIN.

†Note: For recording employee punches via proximity badge the Z14 supports the "Mango" proximity badge-type only. For integration with a third-party proximity badge, contact your service provider.

Features

The Z14 will offer employers the benefit of a built-in high-resolution color screen and next generation processor board with additional memory capacity. These features allow the clock to display valuable and time-sensitive data regarding the employee's time card while clocking in/out (future release).

Other features include:

- Proximity card integration†
- Proximity key fob punching
- PIN punching
- Simple set up and wall mount

Connectivity

The Z14 connects to the web to send employee data for online supervisor editing exclusively through an Ethernet connection, also commonly referred to as "digital," Internet-based, or "IP based."

With this connectivity method, punches are continuously sent throughout the day as employees record punches as opposed to period transmits, which may be common for standard Analog or fax/phone connections.

More Information

Why Choose the Z14?

For employers who are evaluating which time clock to purchase for tracking employees, be sure to consider choosing a clock that will deliver valuable information to the employee regarding their time card. Such data can improve employee accountability and job satisfaction (future release).

What Type of Prox Card Does the Z14 Read?

The Z14 utilizes a specific, but common type of proximity badge card called "Mango." As such, proximity cards from third-party systems may not be compatible with the Z14. Contact your service provider if you're not sure what type of card you are currently using.

“Best Fit for the Z14” - Practical Application

The Z14 is an ideal fit for employers desiring a cost-effective time clock that reports employee punches in real time through an Ethernet connection, and can display valuable information to the employee at clock in/out regarding their time card (future release). The Z14 is a cost effective and practical solution for employers wishing to collect punches through a PIN code, proximity card, or proximity key fob.

Because the Z14 supports only a specific type of proximity badge card known as “Mango,” it may not be compatible with proximity cards from a third-party system, such as a security or building access system. Please ask your service provider if you have questions about existing badge cards.

Accessory Guide

Badge Rack

Protect your badge cards from bending, damage, general wear and tear, or being lost with a durable steel 40-card badge rack.

Proximity Badge Cards

Enable employees to clock in through a proximity badge cards (“Mango” format).

Key Fob

Choose from three key fobs styles to enable employee clock in/out (plastic: white and blue or faux leather: black).

Badge Card Clip

Add a badge card clip to employee time cards for improved portability.
